Berlin-Brandenburg • available from Nov 2026 • German citizen • EN fluent / DE good / Persian native

PROFILE

Builds custom agent harnesses for domain-specific applications, knowledge graphs and Graph RAG; evaluates LLMs, VLMs, VLAs and world models.

LLMs / VLMs • Knowledge Graphs • Agentic Vision • Multimodal AI • Scene Reconstruction
CONTEXT ENGINEERING • DATA PROVENANCE • MODEL VALIDATION • REINFORCEMENT LEARNING

AI ENGINEERING

10+ YEARS

RESEARCH TO PRODUCTION

PYTHON • RUST • AI / ML

PROFESSIONAL EXPERIENCE

Independent AI/ML Engineer & PhD Candidate

2020.04 - Present

Self-employed - PhD candidate at Technische Universität Darmstadt

Berlin & Darmstadt, Germany

- Building biophysical/functional neural models, PID (Partial Information Decomposition), Vision-Language-Action systems, VLA evaluation and neural control
- Building custom AI agent harnesses for domain-specific applications; multimodal 3D perception and auditable visualization

Senior AI Engineer

2026.01 - 2026.03

Neural Frames UG

Berlin & Hamburg, Germany

- Evaluated LLMs, VLMs and end-to-end pipelines, tracing runs and results with Langfuse
- Made limited contributions to Python pipelines for model evaluation and inference

AI Engineering Resident

2025.09 - 2026.01

Merantix AI Campus (Hacker Room)

Berlin, Germany

- Built generative-media systems with Gaussian splatting and diffusion models for spatiotemporal anchoring
- Implemented confidential-computing smart contracts in Rust
- Deployed product services and data infrastructure across Cloudflare Workers, D1, R2, Google Cloud Run and AWS EC2

Senior AI Engineer

2024.07 - 2025.07

Vision Labs UG

Berlin & Hamburg, Germany

- Built workflows for prompt optimization, LLM evaluation and observability with DSPy and Langfuse
- Designed data and MLOps pipelines on Azure and Google Cloud with staging, automated tests and CI/CD

Research Associate

2021.07 - 2024.07

Freie Universität Berlin

Berlin, Germany

- Scaled and optimized large neural-network simulations in C/C++ and Python
- Built retrieval-augmented generation (RAG) workflows for technical literature and evaluated AI-agent reliability
- Applied statistical and machine-learning analysis in Python; reviewed code and research manuscripts in an international team

Research Associate

Georg-August-Universität Göttingen

Göttingen, Germany

Neural networks, Partial Information Decomposition (PID), information theory and reproducible data workflows

2019.07 - 2020.06

Research Associate

Goethe-Universität Frankfurt

Frankfurt am Main, Germany

Simulation and statistical analysis of neural-network models

2017.03 - 2019.07

Visiting Scientist

Max Planck Institute for Dynamics and Self-Organization

Göttingen, Germany

Statistical methods for neural-network analysis

2017.03 - 2019.03

Research Associate

Forschungszentrum Jülich

Jülich, Germany

Neural-network simulations and reinforcement-learning experiments

2015.02 - 2017.03

Software Developer

Centre for Content Creation

Cyberjaya, Malaysia

Award-winning iPhone/iPad applications and digital products

2010.09 - 2012.03

EDUCATION

PhD Candidate (Dr. rer. nat.)

Technische Universität Darmstadt

Darmstadt, Germany

- New mathematical PID analyses and information-theoretic representation analysis; Engram’s domain-specific AI agent produces provenance-tracked neural-model candidates for closed-loop neural-network simulations, with bounded compilation and simulation checks, in reproducible computational-neuroscience workflows

2020.04 - Present

Master’s by Research in Biosciences: Neuroscience

University College London

London, United Kingdom

Computational Neuroscience • Graduated with Distinction (Top 10%, CGPA 4.0/4.0)

2012 - 2014

Bachelor of Science (Honours) in Computer Science

Anglia Ruskin University

Cambridge, United Kingdom

Graduated with First Class Honours (Top 1%, CGPA 4.0/4.0)

2009 - 2012

SELECTED AWARDS & FUNDING

EDTH / 2025

Special Mention at the European Defense Tech Hackathon Berlin 2025; co-organized with the Bundeswehr Cyber Innovation Hub

HUMAN BRAIN PROJECT

Research funding

NEAR HORIZON

Confidential-computing grant

UCL & SHEFFIELD

Competitive academic scholarships

IOS APPLICATIONS

15 international product awards

SELECTED AI ENGINEERING PROJECTS

engram
★ 15 RESEARCH PROTOTYPE
PROVENANCE-CONSTRAINED NEURAL R&D
Domain-specific AI agent turns qualified evidence into neural-model candidates, with bounded compilation and simulation checks.
Neural Networks Knowledge Graphs Closed-loop Sim

pid-rs
★ 14 V0.9 SOURCE PRERELEASE
VERIFIABLE INFORMATION DECOMPOSITION
Measures how much information several signals share about an outcome, with built-in checks and provenance that keep results reproducible.
Rust / Python Information Theory Statistical ML

prisoma
★ 2 V0.9 PRERELEASE / ACTIVE R&D
AUDITABLE CLOSED-LOOP EXPERIMENTS
Simulation environment for closed-loop VLA and world-model experiments, with capture, replay and provenance.
Rust / Python VLA + World Models Embodied Sim

NCP
★ 16 V0.8 RELEASE / 1.0 RC BLOCKED
NEURAL CONTROL PROTOCOL
Links neural simulators, AI controllers and robots through four typed planes with local fail-safes and provenance.
Rust Typed Control Planes Zenoh

manwe
★ 3 ALPHA
AIRSPACE PERCEPTION
Research workbench for vision, acoustics, multi-camera geometry and tracking; model exports must pass artifact-identity and numerical gates.
Python PyTorch Multimodal Perception

crebain
★ 21 RESEARCH PROTOTYPE
SPATIAL SITUATIONAL AWARENESS
Unifies Gaussian-splat scenes, native object detection and multimodal 3D tracking in one tactical view for simulated drone operations.
Rust Sensor Fusion Native Inference

cobot-atlas relief-atlas
★ 7 +1,850 PUBLISHED + DOI
OPEN SIMULATION DATASETS
Citable GLB mesh corpora: 2,023 robot-simulation assets on Hugging Face with DOIs; 10,079 disaster-relief assets, licensed per asset.
Hugging Face 3D / VLA Per-asset licensing

melkor
★ 13 HARDENING
GAUSSIAN-SPLAT INTEGRITY
Inspects and deterministically converts 3D Gaussian splats, surfacing numeric hazards and field provenance before pipeline use.
C++ Scene Reconstruction Asset Validation

galadriel
★ 7 RESEARCH PROTOTYPE
CROSS-SENSOR CONSISTENCY
Fail-closed monitor for sensor disagreement on one track, using per-channel innovation tests and signed correlation over producer-declared projections.
Rust NIS / CUSUM Signed Correlation

cortexel
★ 4 0.10.0-DEV.0
AUDITABLE NEURAL FIGURES
Checks scientific figures against declared contracts before rendering, so charts provably match their data and stay reproducible.
Figure Contracts Deterministic SVG Provenance

PORTFOLIO & ENGINEERING ACTIVITY
